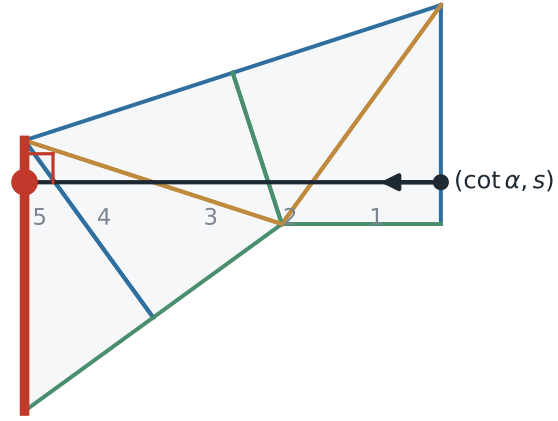
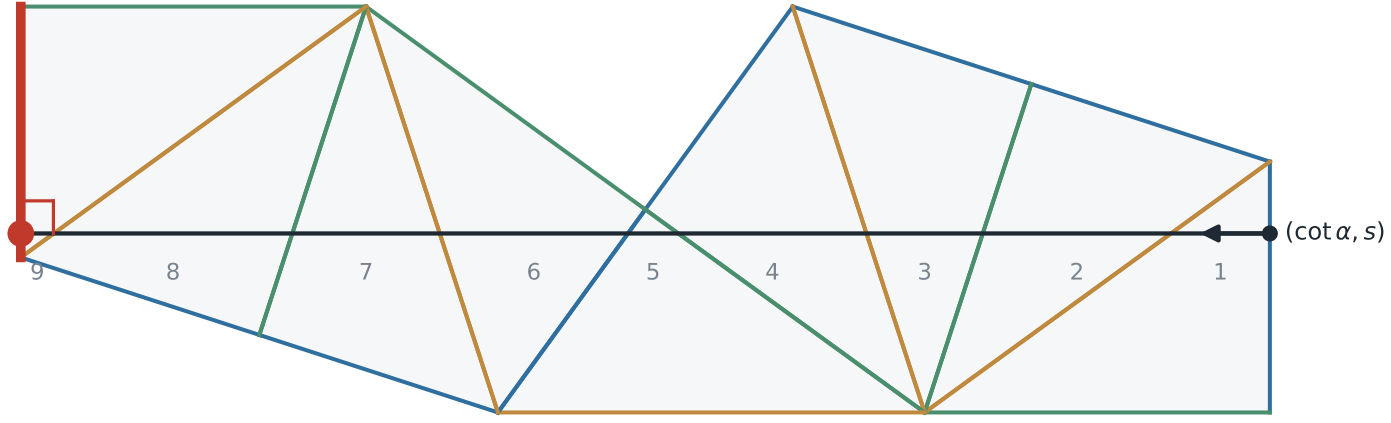
(a) DATA — $2\alpha/\pi = 3/5$, P odd. The ray meets a vertical wall-copy of type H, the only interior vertical class (Prop. 4.4), at developed copy 5 of the 10-hit return — its temporal midpoint (Lemma 2.1a).





(b) DATA — $2\alpha/\pi = 2/5$, P even. NO interior copy is vertical (Prop. 4.3); the first vertical copy the ray meets is a copy of L_1 — the perpendicular return itself, at copy 9.
