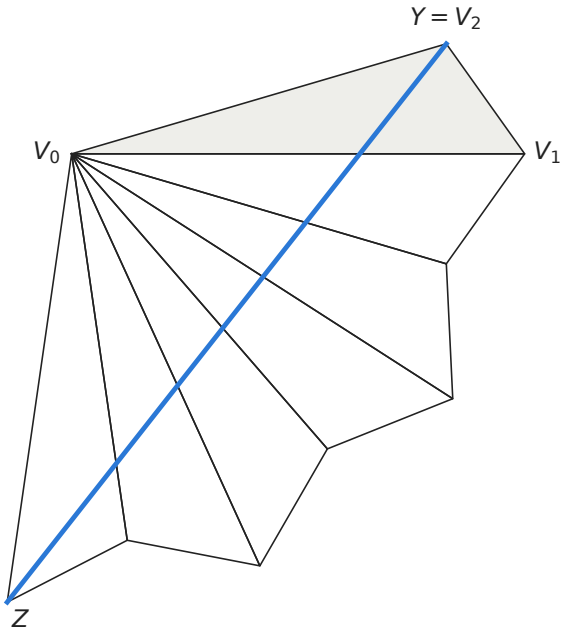
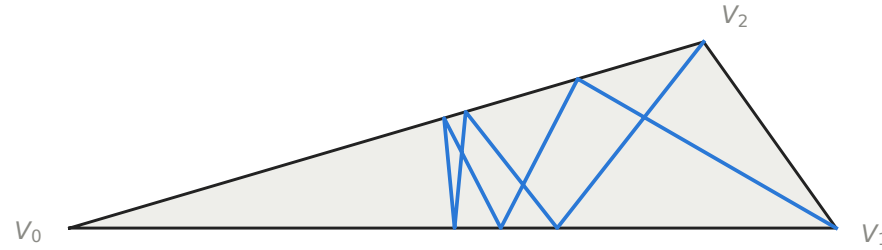
(a) the fan about $V_0$, $b = 10$: $\Delta = (3, 10, 20)$, $N = 33$



(b) folded: the prong $V_2 \to V_1$, 6 reflections in $V_0V_1$, $V_2V_0$



Shaded: Δ. The chord *YZ* crosses each ray of the fan inside its side copy (Proposition 8.1), so its fold is a vertex-to-vertex path meeting no side at a right angle.
