

$$d = Q - 2 \text{ (i.e. } n = 1\text{)}$$

- P even (verified; $P = 2$ is Theorem 9.8)
- ▲ $P = 1$ ($n = 1$)
- ▼ $P = 3$ (Proposition 5.2)
- $P = 5$ (open)
- $P = 7$ (open)
- $P = 9$ (open)

deficit $d = Q - 1 - n(P/Q)$

8/15

$d = 0$: the count is maximal, $n = Q - 1$
